

Lonsdale Packaging Building Addition

Ample Space

After Lonsdale Packaging signed a new client that would require storage of products within their building, they knew it was time to partner with Ayars & Ayars, Inc. to complete a project to add 20,000 sq. ft. of storage space to their existing facility. This design/build project now provides that much needed space that Lonsdale Packaging demands. Our scope of work included sitework, concrete, metal erection and the installation of the MR-24 Standing Seam roof system by Butler Manufacturing. It also included finishes and the installation of the fire sprinkler system within the new addition.
