## Jet Splash #4

### Keeping It Clean

Jet Splash's fourth location features an insulated concrete form (ICF) system designed especially for car washes. This system consists of rigid extruded polymer components that serve as the finished formwork for a variety of concrete walls including bearing, non-bearing, retaining, and foundation wall applications. Wall systems are available in a variety of sizes, shapes and colors to meet many low-rise building needs, from the simplest enclosure to complex architectural designs. Advantages of building with ICF include: thermal efficiency, moisture resistance, sound absorption and a faster construction cycle (when compared to traditional wood framing). Regardless of the method of construction, Ayars & Ayars, Inc. has the experience to ensure complete customer satisfaction.

### Project Details

Location:  
Lincoln, Nebraska

Size:  
4,850 sq. ft.

Type of Construction:  
Insulated Concrete Form (ICF)

Project Completion:  
2013

Jet Splash - Lincoln's only on-line  
full-service car wash.
